During a 2016-2017 survey conducted in Isfahan, Lorestan, Markazi, North Khorasan, Razavi Khorasan, South Khorasan and Tehran provinces located in the Central and North-Eastern Iran, about 1000 specimens of Dolichopodidae were collected and identified. Eight dolichopodid species [*Dolichopus jaxarticus* Stackelberg, 1927, *Hydrophorus viridis* (Meigen, 1824), *Medetera diadema* (Linnaeus, 1767), *M. lamprostoma* Loew, 1871, *M. roghii* Rampini et Canzoneri, 1979, *Tachytrechus kowarzi* Mik, 1864, *Tachytrechus sogdianus* Loew, 1871, and *Thinophilus flavipalpis* (Zetterstedt, 1843)] are recorded for the first time in Iran. *Dolichopus subimmaculatus* Kazerani, Pollet, Khaghaninia, 2017, is placed in synonymy with *Dolichopus perversus* Loew, 1871 (syn. nov.). Lectotype is designated for *D. perversus*.

Key words: Dolichopodidae; Iran; Isfahan; Lorestan; Markazi; North Khorasan; Razavi Khorasan; South Khorasan; Tehran; new records

Introduction

Approximately 8000 (including about 100 fossil) described species and 288 (including 30 fossil) genera of the long-legged flies (Dolichopodidae) are known in the world fauna (Grichanov, 2017). The most recent Iranian list of these flies includes 114 species collected mainly from the north-west of Iran (Grichanov, 2016). Later *Medetera abstrusa* Thunberg, 1955, *M. belgica* Parent, 1936, *M. freyi* Thunberg, 1955, *M. feminina* Negrobov, 1967 and *M. pallipes* (Zetterstedt, 1843) from the Guilan and Mazandaran provinces (Kazerani et al., 2016a), and *Sciapus longulus* (Fallén, 1823) from the Ardabil province (Tajmiri et al., 2016) were reported at the 22nd Iranian Plant Protection Congress without indicating original material. Grichanov, Ahmadi (2016b) described a new species *Poecilobothrus lorestanicus* from the Lorestan province, and Grichanov, Ahmadi (2017a) described a new species *Lamprochromus occidasiaticus* from Turkey and the Markazi province of Iran. Ahmadi et al. (2017) recorded for the first time in Iran *Chrysotus pennatus* Lichtwardt, 1902, *Sybistroma impar* (Rondani, 1843), *Tachytrechus beckeri* Lichtwardt, 1917, *Campsicnemus armatus* (Zetterstedt, 1849), *C. magius* (Loew, 1845), *C. tomkovichi* Grichanov, 2009, *Syntormon fuscipes* (von Roser, 1840) and the genus *Micromorphus* Mik, 1878, collected in the Markazi and Lorestan provinces. The presence of *Chrysotus obscuripes* Zetterstedt, 1838 and *Medetera pallipes* in Iran was confirmed, and the presence of *Dolichopus excisus* Loew, 1859, in Iran was questioned.

Recently, Kazerani et al. (2017) have described eight new for science species, i.e. *Dolichopus fuscicercus*, *D. subimmaculatus*, *Gymnopternus atratus*, *G. flavitibia*, *Hercostomus albicoxa*, *H. setitibia*, *Poecilobothrus annulitarsis* and *P. innotabilis* from the north-west of Iran (East Azerbaijan, West Azerbaijan, Ardabil, Guilan and Mazandaran provinces). The

authors have also excluded *Dolichopus plumipes* (Scopoli, 1763), *D. immaculatus* Becker, 1909, *Gymnopternus angustifrons* (Staeger, 1842), *Poecilobothrus chrysozygos* (Wiedemann, 1817) and *P. bigoti* Mik, 1883, from the Iranian fauna.

Information on Dolichopodidae of the Central Iranian provinces has not been available before our investigations. Grichanov et al. (2010), Grichanov, Ahmadi (2016b, 2017a) and Ahmadi et al. (2016, 2017) published original data on species collected in the Markazi and Lorestan provinces. None species was reported from the Isfahan province. Becker, Stein (1913), who treated the material collected by N. Zarudny (St. Petersburg, Russia) during 1898 and 1901 expeditions, mentioned two species of long-legged flies from "Khorasan". *Dolichopus notatus* Staeger, 1842 (as *Dolichopus notabilis* Zetterstedt, 1843) was collected at "Kerat, Landschaft Haschtadan", now in the Razavi Khorasan province (34.57°N, 60.55°E). *Syntormon pallipes* (Fabricius, 1794) was found at the locality "Gerri-schatur", probably in the same province. Grichanov (Grichanov et al., 2010; Grichanov, Negrobov, 2014; Grichanov, Ahmadi, 2016a) treated also the material (in the Zoological Museum of Moscow State University, Moscow, Russia) collected by the Russian diplomat N.N. Filippov (under the pseudonym Zhenzhurist) in 1936-1938 at Tehran and its environs at Rasht, Jarjarud, "Shimran" (=Shemiran), "Pahlevi" (=Bandar-e Anzali), and 14 species were identified, including a new species *Sciapus iranicus* Grichanov & Negrobov, 2014.

Material and methods

During 2017 season, about 1000 specimens have been sampled by authors of this paper mostly by standard sweep net. Some specimens (e.g., *Medetera* spp.) have been collected by use of a specimen jar. In addition, a small collection of dolichopodid flies sampled in 2016 was received from the Khorasan Plant Protection Station. Most of the identified species are included in the keys to more than 500 Dolichopodidae species of the Caucasus and Eastern Mediterranean (Grichanov, 2007). The general species distribution is given after Negrobov et al. (2013) and Grichanov (2017). Type localities are provided, and country lists (in Asia) are arranged alphabetically. The collectors of specimens were the first two authors of this paper unless otherwise is noted. Photos of some species newly recorded from Iran and habitat photos are provided. The specimens have been studied with a [®]Zeiss Discovery V-12 stereomicroscope and [®]AxioCam MRc5 camera attachment. They will be deposited in collections of the Zoological Institute of the Russian Academy of Sciences, St. Petersburg (ZIN), and the Zoological Museum of Moscow State University, Moscow, Russia (ZMMU).

References are given for species reported formerly from the Lorestan, Markazi, Razavi Khorasan and Tehran provinces of Iran. For the complete Iranian reference list see Grichanov (2016).

New records of Dolichopodidae

Argyra Macquart, 1834

Argyra leucocephala (Meigen, 1824)

MATERIAL. Lorestan prov.: 41 km S Aligudarz, Kagelestan-e Bar Aftab village, 33°02' N, 49°39' E, 1841 m a.s.l., 23.V.2017, 1♂; Markazi prov.: 8 km SE Arak, Baghdadi, 34°01' N, 49°45' E, 1974 m a.s.l., 18.V.2017, 1♀; Arak Shakhrestan, Masumiyeh rural district, env. of Baghdadi and Hosseinabad villages, 34°01'28-56" N, 49°45'12-46'21" E, 1955-2015 m a.s.l., 18.V.2017, O. Kosterin, 1♀ (in alcohol); Arak env., 26 km W, Baneh village, 34°05' N, 49°24' E, 2117 m a.s.l., 19.V.2017, 4♂♀; Shazand env., 7 km W, Astaneh Town env., Seidan chashmah, 33°55' N, 49°20' E, 2289 m a.s.l., 20.V.2017, 2♀; Arak env., Senjan, river, 34°07'19-54" N, 49°42'17"-43'33" E, 1698-1709 m a.s.l., 28.V.2017, 1♀; Tafresh env., 34°39-40' N, 49°59'-50'02" E, 2036-2084 m a.s.l., 29.V.2017, 1♂;

DISTRIBUTION. Type locality: Austria. Asia (Afghanistan, Iran, Iraq, Israel, Tajikistan, Turkey, Turkmenistan), Caucasus (Abkhazia, Armenia, Azerbaijan, Georgia, Russia: Adygea, Alania, Chechnya, Kabardino-Balkaria, Karachai-Cherkessia, Krasnodar Territory), Europe, North Africa. New for Lorestan province.

***Chrysotus* Meigen, 1824**

***Chrysotus* sp.**

MATERIAL. Razavi Khorasan prov.: Torqabeh, 23.VII.2016, Motamednia, 1♀ (in alcohol).

REMARK. First record of the genus from the Razavi Khorasan province.

***Chrysotus suavis* Loew, 1857**

REFERENCES. Grichanov et al., 2010: 198 (Markazi); Ahmadi et al., 2016: 192 (Markazi); 2017: 66 (Lorestan).

MATERIAL. Esfahan prov.: 26 km S Golpayegan, Khvansar, Sarcheshmeh River, 33°14' N, 50°18' E, 2182 m a.s.l., 21.V.2017, 1♀; Lorestan prov.: 22 km S Aligudarz, Golbahar River at Golbahar-e Seikh Miri and Golbahar-e Mohammad Baqeri villages, 33°11' N, 49°40' E, 2049 m a.s.l., 23.V.2017, 2♀; 19 km SW Dorud, Sezar River at 2 km downstream of Bisheh Waterfall, 33°20' N, 48°53' E, 1181 m a.s.l., 26.V.2017, 2♀; Markazi prov.: Arak env., 26 km W, Baneh village, 34°05' N, 49°24' E, 2117 m a.s.l., 19.V.2017, 1♀; Garehchay River, 0.8 km SSW Gavigodar village, 34°06'28-40" N, 49°21'45-57" E, 1803-1805 m a.s.l. 19.V.2017, O. Kosterin, 1♀ (in alcohol); Shazand env., 7 km W, Astaneh Town env., Seidan chashmah, 33°55' N, 49°20' E, 2289 m a.s.l., 20.V.2017, 1♀; Arak City NE suburbs, a wasting land, 34°07'19-54" N, 49°42'17"-43'33" E, 1698-1709 m a.s.l., 28.V.2017, O. Kosterin, 2♂ (in alcohol).

DISTRIBUTION. Type locality: Germany: "Coln"; Austria: "Neusiedler See in Ungarn". Asia (Afghanistan, Palaeartic China, Iran, Iraq, Israel, Kyrgyzstan, Middle Asia, Mongolia, Russian Far East, Siberia, Turkey), Caucasus (Armenia, Azerbaijan, Georgia, Russia: Adygea, Alania, Kabardino-Balkaria, Krasnodar Territory, Rostov Region), Europe, North Africa. New for Esfahan province.

Dolichopus Latreille, 1796

***Dolichopus jaxarticus* Stackelberg, 1927 (Figs. 1-2)**

MATERIAL. Razavi Khorasan prov.: Mohamadia, 27.VIII.2016, Motamednia, 1♂, 1♀ (in alcohol).

ADDITIONAL MATERIAL EXAMINED. South Tajikistan: Dusti env., 24.VI.1985, Grichanov & Shamshev, 1♂.

DISTRIBUTION. Type locality: "prov. Syrdarjensis et Samarkandica (Tshardary)" [South Kazakhstan, Uzbekistan]. Asia (China: Xinjiang; Kazakhstan, Uzbekistan), Ukraine (Kherson). New for Iran and Tajikistan.

REMARKS. Negrobov (1991) included in error South Russia in the distribution area of the species.

***Dolichopus perversus* Loew, 1871**

=*Dolichopus subimmaculatus* Kazerani, Pollet, Khaghaninia, in: Kazerani et al., 2017: 117, **syn. nov.** Type locality: Iran: East Azerbaijan, Arasbaran, Chichekli.

=*Dolichopus immaculatus* of authors, not Becker, 1909. Pârvu, 1996: 280; Kazerani et al., 2014: 140; Khaghaninia et al., 2014: 589.

REFERENCES. Grichanov et al., 2010: 198 (Tehran); Ahmadi et al., 2017: 66 (Lorestan, Markazi).

MATERIAL. Esfahan prov.: Golpayegan Shahrestan, Ghomrood River left bank just upstream of the lower reserve, 33°25'02-14" N, 50°07'08-12" E, 1924-1931 m a.s.l., 21.V.2017, O. Kosterin, 1♀ (in alcohol); Markazi prov.: Arak Shakhrestan, Masumiyeh rural district, env. of Baghdadi and Hosseinabad villages, 34°01'28-56" N, 49°45'12-46'21" E, 1955-2015 m a.s.l., 18.V.2017, O. Kosterin, 1♀ (in alcohol); Arak env., 26 km W, Baneh village, 34°05' N, 49°24' E, 2117 m a.s.l., 19.V.2017, 5♂♀; Shazand Shahrestan, Baneh village, 34°05'01-08" N, 49°24'26-38" E, 2105-2112 m a.s.l., 19.V.2017, O. Kosterin, 1♂ (in alcohol); Arak City NE suburbs, a wasting land, 34°07'19-54" N, 49°42'17"-43'33" E, 1698-1709 m a.s.l., 28.V.2017, O. Kosterin, 1♂ (in alcohol); Arak env., Kavir-e Meighan, Lake S bank, 34°09' N, 49°49' E, 1672 m a.s.l., 30.V.2017, 1♂.

TYPE MATERIAL EXAMINED. Lectotype (here designated to fix the current taxonomic concept and ensure consistent future interpretation): ♂, [Tajikistan: Zeravshan valley:] "Заравш. д." [Cyrillic] / 5/ *perversus* n. sp. [old hand-written label; ZMMU]. Possible paralectotypes: 10♂, 5♀, same locality [ZIN]; [Uzbekistan:] "Shakhimardan / 5" [Shohimardon exclave within Kyrgyzstan, 39.98°N, 71.80°E], 1♂; [Kyrgyzstan: about 12 km from Osh:] Mody / 7, 1♂, 3♀; [Uzbekistan:] Tashkent / 8, 1♂; [Tajikistan:] Magian / 6, 1♀; [Kyrgyzstan: Osh region:] Gulsha / 10, 1♀ (ZMMU, ZIN).

ADDITIONAL MATERIAL EXAMINED. Tajikistan: Sangvor, 10.VI.1977, Zlobin, 4♂; Turkey near Akseki, 1750 m, 29.V.2006, N. Vikhrev, 1♂.

DISTRIBUTION. Type locality: Tajikistan: "Zarawschan Thal [=Zeravshan valley], Turkestan". Asia (Iran, Israel, Kazakhstan, Kyrgyzstan, Tajikistan, Turkey), Caucasus (Abkhazia, Armenia). New for Esfahan province.

REMARKS. The detailed description and illustrations of *Dolichopus subimmaculatus* (Kazerani et al., 2017) have no morphological differences from the studied material of *Dolichopus perversus* from several countries, including possible syntypes of *D. perversus* found in the ZMMU and ZIN collections. The discoloration of the specimens collected by A.P. Fedchenko is related to about 150 years storing of the collection. A colour difference of femora noted by Kazerani et al. (2017) in their new species belongs to the intra-specific variation of *D. perversus*. Therefore, we consider the two names as synonyms.

***Dolichopus siculus* Loew, 1859**

REFERENCES. Ahmadi et al., 2016: 192 (Markazi; as *Dolichopus excisus* Loew, 1859), 2017: 66 (Lorestan, Markazi).

Kosterin, 5♀ (in alcohol).

DISTRIBUTION. Type locality: Germany: Hamburg. Asia (China, Cyprus, Iraq, Iran, Israel, Kazakhstan, Mongolia, Turkey), Caucasus (Abkhazia, Georgia, Russia: Chechnya, Kabardino-Balkaria, Krasnodar Territory, Stavropol Territory), Europe, North Africa; Oriental, Australasian, Afrotropical and Neotropical Regions. New for Lorestan and Markazi provinces.

***Hydrophorus viridis* (Meigen, 1824) (Figs. 6-7)**

MATERIAL. Esfahan prov.: 15 km WSW Golpayegan, Ghomrood River left bank just upstream of the lower reserve, 33°25' N, 50°07' E, 1925 m a.s.l., 21.V.2017, 1♂.

DISTRIBUTION. Type locality: Austria. Asia (Afghanistan, China, Kazakhstan, Mongolia, "Palestine", Tajikistan, Uzbekistan), Caucasus (Russia: Krasnodar Territory, Rostov Region), Europe, North Africa; Oriental China. New for Iran.

***Liancalus* Loew, 1857**

***Liancalus virens* (Scopoli, 1763)**

REFERENCES. Grichanov, Ahmadi, 2016a: 8 (Tehran).

MATERIAL. Lorestan prov.: 22 km S Aligudarz, Golbahar River at Golbahar-e Seikh Miri and Golbahar-e Mohammad Baqeri villages, 33°11' N, 49°40' E, 2049 m a.s.l., 23.V.2017, 2♂; 19 km SW Dorud, Sezar River at 2 km downstream of Bisheh Waterfall, 33°20' N, 48°53' E, 1181 m a.s.l., 26.V.2017, 2♂, 1♀; Markazi prov.: Shazand env., 9 km NW, Bolagh spring, 33°59' N, 49°21' E, 1866 m a.s.l., 20.V.2017, 2♂, 1♀; 18 km SE Shazand, Emarat, 33°51'49-59" N, 49°34'39-45" E, 1995-2001 m a.s.l., 20.V.2017, 1♀; Tehran prov.: Velenjak river bridge, 35°49'23" N, 51°23'59" E, 1935 m a.s.l., 2.VI.2017, Kosterin, 5♀.

DISTRIBUTION. Type locality: not given ["Carnioliae indigena", Slovenia]. Asia (Cyprus, Iran, Israel, S Kazakhstan, Kyrgyzstan, "Siberia", Tajikistan, Turkey), Caucasus (Abkhazia, Azerbaijan, Georgia, Russia: Chechnya, Krasnodar Territory), Europe, North Africa. New for Lorestan and Markazi provinces.

REMARKS. *Liancalus virens* was found in the old Zhenzhurist's collection in the Zoological Museum of Moscow State University (Grichanov, Ahmadi, 2016a), being taken by the Russian diplomat and Diptera collector N.N. Filippov (under the pseudonym Zhenzhurist) more than 80 years ago in Tehran and here recorded from Iran for the second time. The species is rediscovered in northern environs of Tehran, and its local population survival conditions are probably favourable. The species has been also found in the Lorestan and Markazi provinces, being probably widespread in mountains of Iran. Adults are commonly found resting on vertical wet rock or concrete surfaces at springs and waterfalls.

Medetera Fischer von Waldheim, 1819

Medetera anjudanica Grichanov et Ahmadi, 2017

MATERIAL. Markazi prov.: Arak env., 35 km ESE, Anjudan village, [33°59'03" N, 50°02'01" E, 2036 m a.s.l., on house wall], 22.V.2017, 2♂.

REMARK. This species is described and illustrated separately (Grichanov, Ahmadi, 2017b).

Medetera diadema (Linnaeus, 1767) (Fig. 5)

MATERIAL. Tehran prov.: Velenjak, Inst. Pl. Prot., 1♂, 2♀.

DISTRIBUTION. Type locality: Sweden: Scania. Asia (Kazakhstan, Turkey, Siberia), Caucasus (Armenia, Azerbaijan, Georgia, Russia: Alania, Chechnya, Kabardino-Balkaria, Krasnodar Territory, Rostov Region, Stavropol Territory), Europe, North Africa. New for Iran.

REMARKS. *Medetera diadema* together with two more *Medetera* species (see below) was taken from *Platanus* tree trunks in a park at the Institute of Plant Protection in Tehran.

Medetera lamprostoma Loew, 1871 (Figs. 3-4)

MATERIAL. South Khorasan prov.: Mazarkahi, 5.IX.2016, Motamednia, 1♂ (in alcohol).

DISTRIBUTION. Type locality: Tajikistan: "Saravshan" [=Zerafshan] valley. Asia (Tajikistan, Turkmenistan, Uzbekistan). New for Iran.

Medetera meridionalis Negrobov, 1967

REFERENCES. Ahmadi et al., 2017: 68 (Lorestan, Markazi).

MATERIAL. Lorestan prov.: 20 km SE Borujerd, Hayan village env., 33°47'27-48'14" N, 48°54'16"-56'31" E, 1688-1858 m a.s.l., 25.V.2017, 5♂♀; Markazi prov.: Tafresh env., 34°37' N, 49°56' E, 2319 m a.s.l., 29.V.2017, 7♂♀.

DISTRIBUTION. Type locality: Russia: Voronezh, near Novokhopersk river. Asia (Iran, Kazakhstan, Siberia, Turkey), Caucasus (Armenia, Azerbaijan, Georgia, Russia: Krasnodar Territory, Rostov Region). Europe.

Medetera pallipes (Zetterstedt, 1843)

REFERENCES. Ahmadi et al., 2017: 68 (Markazi).

MATERIAL. Esfahan prov.: 15 km WWS Golpayegan, Ghomrood River left bank just upstream of the lower reserve, 33°25' N, 50°07' E, 1925 m a.s.l., 21.V.2017, 1♂; Tehran prov.: Velenjak, Inst. Pl. Prot., 1♂, 5♀.

DISTRIBUTION. Type locality: Scania, "in Ostrog ad Wadstena; Botnia orientali ad Johannis Ro prope Torneä" [Sweden; Denmark]. Asia (Iran, Israel, Turkey), Caucasus (Georgia, Russia: Chechnya, Kabardino-Balkaria, Krasnodar Territory, Stavropol Territory), Europe, North Africa. New for Esfahan and Tehran provinces.

Medetera roghii Rampini et Canzoneri, 1979

MATERIAL. Lorestan prov.: 19 km SW Dorud, road 5 km NW of Chenar Gerit village, 33°24' N, 48°44' E, 2150 m a.s.l., 26.V.2017, 3♂.

DISTRIBUTION. Type locality: Spain: Menorca. Italy (Sicilia), Malta and Spain (Menorca). New for Asia and Iran.

REMARKS. In contrast to closely related *M. truncorum* (see below), which is a common inhabitant of tree trunks, *M. roghii* has been collected from stones situated on rather dry mountain slope covered with sparse shrubs and xerophilous grasses. The species can be reliably distinguished from other related species by the morphology of hypopygium only; i.e. by the presence of a pair of long flattened apical setae on ventral lobe of surstylus and flattened epandrial setae (see Negrobov, Naglis, 2016).

Medetera truncorum Meigen, 1824

MATERIAL. Lorestan prov.: 22 km SWW Dorud, 5 km NW of Chenar Gerit village, 33°24' N, 48°44' E, 2150 m a.s.l., 26.V.2017, 9♂♀; Lorestan prov.: 19 km SW Dorud, 33°19'45"-20'11" N, 48°52'43"-53'45" E, 1176-1213 m a.s.l., 26.V.2017, 6♂♀; Lorestan prov.: 20 km SE Borujerd, Hayan village env., 33°47'27-48'14" N, 48°54'16"-56'31" E, 1688-1858 m a.s.l., 25.V.2017, 3♂♀; Razavi Khorasan prov.: Torqabeh, 27.VII.2016, Motamednia, 1♂ (in alcohol); Tehran prov.: Velenjak, Inst. Pl. Prot., 1♀.

DISTRIBUTION. Type locality: Germany: Hamburg. Asia (Iran, Israel, Siberia, Turkey), Caucasus (Azerbaijan, Russia: Chechnya, Krasnodar Territory), Europe, North Africa; Nearctic Region. New for Lorestan, Razavi Khorasan and Tehran provinces.

DISTRIBUTION. Type locality: Algeria: Biskra. Palaeartic: Asia (Iran, Israel, Saudi Arabia, Turkmenistan), Spain (Canary Is.), North Africa; Afrotropics (Ethiopia). New for Lorestan province.

REMARK. The species was not collected in Iran since N. Zarudny's (St. Petersburg, Russia) 1898 and 1901 expeditions.

***Tachytrechus sogdianus* Loew, 1871 (Fig. 13)**

MATERIAL. Lorestan prov.: Aligudarz Shahrestan, Golbahar River at Golbahar-e Seikh Miri and Golbahar-e Mohammad Baqeri villages, 33°11'28"-38" N, 49°40'02"-14" E, 2042-2079 m a.s.l., 23.V.2017, O. Kosterin, 1♂ (in alcohol).

ADDITIONAL MATERIAL EXAMINED. Tajikistan: Sangvor, 10.VI.1977, Zlobin, 1♂.

DISTRIBUTION. Type locality: Tajikistan: Zeravshan Valley, Varzaminor. Asia (Kyrgyzstan, Tajikistan, Uzbekistan). New for Iran.

***Teuchophorus* Loew, 1857**

***Teuchophorus* sp.**

MATERIAL. Lorestan prov.: 22 km S Aligudarz, Golbahar River at Golbahar-e Seikh Miri and Golbahar-e Mohammad Baqeri villages, 33°11' N, 49°40' E, 2049 m a.s.l., 23.V.2017, 1♀.

REMARK. First record of the genus for Lorestan province.

***Thinophilus* Wahlberg, 1844**

***Thinophilus flavipalpis* (Zetterstedt, 1843) (Figs. 8-10)**

MATERIAL. Markazi prov.: Arak env., Kavir-e Meighan, Lake S bank, 34°09' N, 49°49' E, 1672 m a.s.l., 30.V.2017, 1♂, 1♀.

DISTRIBUTION. Type locality: Sweden: Gottlandia, Bursviken. Asia (N China, Israel, Kazakhstan, Kyrgyzstan, Mongolia, Syria, Turkey), Caucasus (Azerbaijan, Russia: Krasnodar Territory, Rostov Region), Europe, North Africa; Oriental China. New for Iran.

Discussion

As a result of 2016-2017 survey conducted in seven provinces, a new material of Dolichopodidae was collected and identified, belonging to 18 genera and 41 (including 4 unnamed) species listed above. Almost all species were gathered along banks of rivers, lakes and other water sources; nevertheless, *Medetera* species inhabited rather dry places and were taken from tree trunks, stones or even house walls (see Figs. 14-19). The present research gives new records from the Central and North-Eastern Iran, including *Dolichopus jaxarticus*, *Hydrophorus viridis*, *Medetera diadema*, *M. lamprostoma*, *M. roghii*, *Tachytrechus kowarzi*, *T. sogdianus* and *Thinophilus flavipalpis* found for the first time in Iran.

Most collected species are widespread across the Palaeartic Region. According to sampling data, three species (*S. pallipes*, *P. regalis* and *T. notatus*) have the highest total abundance in at least Markazi and Lorestan provinces. One species (*Medetera anjudanica*) is a new for science and is described separately (Grichanov, Ahmadi, 2017b), being at present endemic of the Central Iran along with *Poecilobothrus lorestanicus*. As a result of our investigation, the number of reported dolichopodid species from Iran includes now about 150 species. Fauna of the Markazi province includes 40 identified species, the Lorestan province contains 35, the Tehran province – 17, and the Esfahan province – 9 identified species. We suggest that many more species will be revealed in Iran, if new provinces and localities are investigated with the use of mass trapping methods. The total number of Iranian species can reach to 400–500 species.

Acknowledgements

The authors are sincerely grateful to Dr. Akram Ahmadi (Arak, Iran) and Dr. Nikita Vikhrev (Moscow, Russia) for the organizing our field trips, as well as to many Iranian friends for their help during the field work.
